^{*} Priming volumes are approximate and are done without accessories.
† Flow rate values are approximate and are determined using deionized water at 100 cm head height.
†† Pump flow rates are determined at maximum pump pressure of 10 psig and represent approximate flow capabilities.
*** Pressure injection flow rates are determined at the injector pressure setting of 300 psi maximum using media of 11.8 centipoise viscosity, with 152 cm pressure tubing.
